

WEEKLY ECONOMIC UPDATE

Period of August 26 – 30, 2024

Presented by:

Economic Research Division, PT Peningkat Efek Indonesia (PEFINDO)

EXECUTIVE SUMMARY

- In the last week of August 2024, the United States (US) released its second estimate of Q2-2024 economic growth data which was revised upward to 3.0%. In addition, there was also the release of PCE inflation data which remained at 2.5% YoY on an annual basis, as well as declining unemployment benefit claims although still above the average since the beginning of the year. The Eurozone reported a preliminary estimate of Aug'24 inflation which is expected to fall to 2.2% and the unemployment rate which fell to 6.4%. In Japan, it was reported that the Jul'24 unemployment rate unexpectedly rose to 2.7% and became the highest since Aug'23. The People's Bank of China launched CNY300 billion through a 1-year Medium Term Lending Facility while maintaining interest rates at 2.3%. In addition, there was the release of Apr-Jun'24 economic growth data from India which slowed to 6.7%.
- Domestically, the Government has decided to re-implement the 100% Government Borne Value Added Tax policy for home purchases priced up to IDR5 billion in the Sep-Dec'24 period. In addition, the Government and the DPR have agreed on the Basic Macroeconomic Assumptions, Development Targets, and Development Indicators for the 2025 State Budget with changes to the exchange rate target and 10-year SBN yield. In the same week, the OJK launched the Roadmap for the Development and Strengthening of the Indonesian Guarantee Industry 2024-2028.
- Movements in crude oil and nickel commodities recorded weekly declines in line with increasing supply, the same thing also decreased in gold commodities as the dollar and US bond yields strengthened. However, coal and CPO commodities strengthened in line with the trend of movements in rival commodities.
- The majority of stock markets strengthened following the release of US economic data and strong market expectations for an interest rate cut in September. The same thing applies domestically, the JCI has again touched its all-time high for the 13th time in the last week of trading.
- The dollar strengthened last week after correcting in the past few weeks after revised economic growth data showed higher than previously estimated figures. Meanwhile, the Euro appreciated more than 1% last week.
- Currencies in Asia moved mixed amid a stronger dollar. The Japanese yen and South Korean won depreciated. Likewise, the Thai baht and Singapore dollar each depreciated last week. In contrast, the Malaysian ringgit appreciated more than 1%. The rupiah strengthened the previous week because foreign capital flowed back into the domestic market despite the stronger dollar.
- The US bond market steepened bearishly last week. The 2-year yield stagnated while the 10-year yield rose. Bond markets in the Eurozone and the UK also performed similarly. Meanwhile, the 10-year yield in Asia was generally relatively unchanged, except in South Korea, where the percentage rose higher.
- The People's Bank of China bought long-term government bonds. Traders interpreted the move as a preparation to directly support bond yields in the booming debt market.
- The yield in the domestic market did not change much. At the beginning of last week, foreigners posted a fairly large daily net sell. However, foreign capital flowed back after that; cumulatively, foreigners posted net buys during the last week. The government bond auction on Tuesday of the previous week recorded almost four times more incoming bids than those won.
- The domestic bond index posted a positive weekly performance, supported by the positive performance of the government bond index and corporate bonds. The 3-year corporate bond yield moved mixedly amid a slight increase in the benchmark yield. The decrease in the premium contributed to the decline in the 3-year yield for AAA and A ratings. Conversely, the increase in the premium has pushed up the yield on BBB-rated corporate bonds.
- In the period August 26-30, 2024, there were issuances of bonds that reached IDR4.42 trillion. Meanwhile, throughout September 2024, PEFINDO recorded debt securities that matured at IDR8.83 trillion. Then in October 2024, November 2024, and December 2024, each was valued at IDR11.79 trillion, IDR12.34 trillion, and IDR16.07 trillion.
- Throughout this week, we highlighted news from 15 (fifteen) industrial sectors. Among the fifteen industries, we made news from the metal and gold industry with the title "Crisis Hits Steel Industry" and from the plantation industry entitled "Food Commodity Prices Rise Again" as the main highlight of our selected news.

A. MACROECONOMIC DEVELOPMENT

1) Global Economic Development

- The United States (US) released its second estimate of Q2-2024 economic growth data which grew by 3.0%, higher than the initial estimate (2.8%) and the previous quarter (1.4%). This upward revision was mainly due to higher consumer spending (2.9% vs 2.3%) which is the largest component and the driver of the US economy, as well as a revision to the import component (7% vs 6.9%). In addition, downward revisions were made to non-residential fixed investment (4.6% vs 5.2%), exports (1.6% vs 2%), government spending, private equipment investment, and residential fixed investment.
- US personal consumption expenditure (PCE) inflation increased by 0.2% MoM in Jul'24 (Jun'24: 0.1%) or when viewed annually remained at 2.5% YoY (Jun'24: 2.5%) and below the projection of 2.6%. On a monthly basis, services prices increased 0.2% MoM, while prices of goods were flat. Core PCE inflation also increased 0.2% MoM (Jun'24: 0.2%) or remained unchanged at 2.6% YoY on a yearly basis, below market expectations of 2.7%.
- The number of people filing for unemployment benefits in the US in the week ended 24 Aug'24 decreased by 2,000 from the previous week to 231,000. Despite the decrease, this number remains above the average since the beginning of the year, reinforcing the ongoing cooling trend in the labor market, as highlighted by the July jobs report and the significant downgrade in the revisions to the non-farm payroll data.
- The preliminary estimate of the Eurozone inflation rate in Aug'24 is expected to ease to 2.2% (Jul'24: 2.6%) and is consistent with market expectations marking the softest increase in consumer prices since Jul'24. This contrasts with the previous trend (inflation higher than the 2.5% threshold) and shows progress towards the ECB's 2% target. However, the slowdown was caused by a sharp decline in energy costs due to the baseline effect that began in August (-3% vs 1.2% in July), while inflation slowed for non-energy industrial goods (0.4% vs 0.7%). On the other hand, inflation increased for services (4.2% vs 4%) and food, alcohol, & tobacco (2.4% vs 2.3%). Meanwhile, core inflation remained at 2.8%.
- The unemployment rate in the Eurozone in Jul'24 fell to a record low of 6.4% (Jun'24: 6.5%). The number of unemployed individuals decreased by 114 thousand from the previous month to 10.990 million. Meanwhile, the youth unemployment rate (job seekers aged under 25) also decreased to 14.2% (Jun'24: 14.4) and became the lowest since Jun'23.
- Japan's unemployment rate, in Jul'24 surprisingly increased to 2.7% (Jun'24: 2.5%) and became the highest since Aug'23. The number of unemployed increased by 110 thousand to 1.87 million, while the number of employed people decreased by 200 thousand to 67.66 million. The labor force participation rate (non-seasonally adjusted) increased to 63.5% in Jul'24 (Jul'23: 63.1%). Meanwhile, the jobs-to-applications ratio increased to 1.24 from a 2-year low in Jun'24 (1.23).
- The People's Bank of China unveiled CNY300 billion through a 1-year Medium-term Lending Facility (MLF) to banking institutions on 26 Aug'24 while keeping the interest rate steady at 2.3%, following a 20 bps cut in Jul'24. Monday's operation was delayed from its usual schedule (every mid-month) as it was part of the central bank's plan to overhaul its policy rate system by gradually reducing the role of the MLF rate and shifting to using short-term rates to guide the rest of the central bank market. With CNY401 billion worth of MLF loans expiring on 15 Aug, the central bank drained a net of CNY101 billion in cash from the banking system. In addition, the PBoC also injected CNY471 billion through a 7-day reverse repurchase operation and kept the seven-day interest rate at 1.7%.
- India's economy grew at a slower pace to 6.7% YoY in Apr-Jun'24 (Jan-Mar'24: 7.8% YoY) and was below market expectations (6.9%). This was the slowest pace in five quarters, driven by a sharp slowdown in government spending as the much-awaited general elections brought some of the government's usual activities to a standstill. However, the slowdown in consumer spending also suggests that the Indian economy is less resilient to high interest rates, strengthening the case for a more dovish RBI policy stance.

2) Domestic Economic Development

- The government has decided to re-implement the Government Borne Value Added Tax (PPN DTP) policy of 100% for home purchases priced up to IDR5 billion in the September-December 2024 period. To extend the 100% PPN DTP, the government has allocated an additional budget of IDR500 billion in Semester II 2024. Previously, the government had budgeted an allocation for PPN DTP for 2023-2024 of IDR3.2 trillion. In addition, the government has also increased the quota for the Housing Financing Liquidity Facility (FLPP) from 166,000 units to 200,000 units.
- The Government and the DPR agreed on the Basic Macroeconomic Assumptions, Development Targets, and Development Indicators for the 2025 State Budget. There were changes to two indicators previously planned in the Draft State Budget, namely the rupiah exchange rate agreed at IDR16,000/USD (previously IDR16,100/USD) and the 10-year SBN yield of 7.0% (previously 7.1%). The decrease in yield occurred after the DPR Budget Committee leadership requested a decrease in the yield target to at least an average of 6.9%, in line with the assessment that high SBN interest rates have also created a high burden on APBN interest payments.
- The Financial Services Authority (OJK) launched the Roadmap for the Development and Strengthening of the Indonesian Guarantee Industry 2024-2028 to increase the growth and competitiveness of the guarantee industry and support national economic growth. The Chairman of the OJK Board of Commissioners said that this is a strategic policy step by OJK in supporting the strengthening of the national economy by increasing the role of the guarantee industry in helping MSMEs access capital through credit and financing facilities.

B. COMMODITY MARKET DEVELOPMENT

- Oil prices posted a weekly decline of 0.28% as investors weighed expectations of an OPEC+ supply increase starting in October and waning hopes of a significant US interest rate cut next month after data showed strong consumer spending. Brent crude oil prices closed at USD78.80 per barrel, marking a decline of 2.40% in August. On the other hand, the Libyan National Oil Company said the closure of oil fields led to the loss of about 63% of the country's total oil production as the conflict between rival eastern and Western factions continues.
- Gold prices in the last week have moved variedly after reaching their highest level last Tuesday (08/27), touching USD2,524.64 per ounce. However, gold prices fell 0.37% in the week, as the dollar and US bond yields strengthened after US inflation data met expectations. Even so, the price of gold remains above the psychological level of US\$2500 per troy ounce. Throughout August, the price of gold managed to rise 2.28%, marking two consecutive months of gold being in a positive trend. Gold prices closed at USD2,503.49 per ounce.
- Coal prices recorded a gain of 0.69% in the week, which aligns with the strengthening gas prices. European gas prices rose to their highest point in 10 days on Friday (08/30). That's as concerns remain about the potential impact of Norway's increased maintenance, with flows across the region expected to hit a 12-month low early next week. However, coal prices are also influenced by sentiment from the latest IEA report, which projects that global coal demand will tend to decline until 2025, coupled with the consolidated trend in natural gas prices.
- Nickel prices fell 0.11% last week. They rebounded at the start of the week but fell again at the weekend. Nickel prices are still being held back by the rapid expansion of the Indonesian nickel industry, which has caused excess supply. On the other hand, the Indonesian Nickel Mining Association (APNI) has asked Indonesia to no longer depend on Europe and China regarding nickel price benchmarks.
- CPO prices rose 2.84% weekly, closing at MYR3,977 per ton. CPO price movements are observed to be in a bullish trend. The main sentiment influencing CPO price movements in the past week was a signal from the President-elect of Indonesia, Prabowo Subianto, to accelerate the B50 biodiesel program. The bullish trend in the soybean oil market also catalyzes CPO prices. The main sentiment influencing soybean oil price movements is the potential disruption of US soybean supplies due to ongoing bad weather in the Midwest.

Chart 2. 2024 Commodity Price Changes (%YTD)

C. STOCK MARKET DEVELOPMENT

- Wall Street stocks mostly recorded weekly gains, with the Dow Jones Industrial Average notching a record closing high after new US economic data raised expectations that the Federal Reserve will cut interest rates moderately in September. However, one-weekend trading volume on US exchanges was relatively light due to the US stock market holiday on Monday for Labor Day. Weekly, the S&P 500 Index rose 0.24% WoW, the Dow Jones Industrial Average rose 0.94% WoW, while the Nasdaq composite index fell slightly 0.92% WoW.
- European shares rose to an all-time high in weekend trading, ending a volatile month on a bright note after a significant fall in euro zone inflation strengthened market expectations for an interest rate cut in September. Europe's benchmark index, the STOXX 600, rose 1.20% in August, rising for the second month. All significant European regional shares also recorded increases in trading in the last week; the German DAX 30 stock index rose 1.47% WoW, the French CAC Index rose 0.71% WoW, and the FTSE 100 London Index rose 0.59% WoW.
- Asian stock markets mostly closed in the green zone in weekend trading, following US economic data that alleviated recession fears. Investors also assessed a series of data from Japan. The Nikkei 225 Index rose 0.74% Worldwide, Hong Kong's Hang Seng Index rose 2.14% Worldwide, and China's Shanghai Composite index fell slightly 0.43%.
- In a week, the JCI rose 1.68% to 7,670.73 from the previous week's period, namely 7,544.30. The strengthening of the JCI this week is estimated to be influenced by the release of US GDP data and the strengthening of the rupiah exchange rate against the US dollar. JCI has again reached an all-time high, breaking the record for the 13th time in 2024. Furthermore, the market cap also set a record high of IDR13,114.00 trillion at Friday's end of August (08/30). Within a week, eight sector indexes strengthened, led by the property and real estate sector, which rose 5.71%. Furthermore, three other sectors closed in the red zone, led by the technology sector, down 1.81%.

Chart 4. Stock Price Changes (%YTD)

D. EXCHANGE RATE DEVELOPMENT

- The dollar strengthened last week after correcting in the past few weeks. The dollar index closed at 101.70 (+0.97%) on Friday, August 30, 2024. The dollar strengthened after revised economic growth data showed a higher figure than previously estimated, indicating that the US economy is still quite resilient due to solid consumption amid a weakening labor market.
- The Euro appreciated more than 1% last week and closed at EUR1.105 (-1.29%). Meanwhile, the pound sterling also appreciated, closing at GBP1.313 (-0.66%). In general, the outlook for the pound remains strong as investors are increasingly confident that the Bank of England (BoE) and the European Central Bank (ECB) will gradually ease the policy cycle for the rest of the year.
- Currencies in Asia moved mixed amid a stronger dollar. The Japanese yen and South Korean won depreciated to JPY146.17 (+1.25%) and KRW1.338 (+0.82%). Likewise, the Thai baht and Singapore dollar depreciated to THB34.04 (+0.29%) and SGD1.31 (+0.42%), respectively.
- In contrast, the Malaysian ringgit appreciated more than 1% to MYR4.32 (-1.24%). Likewise, the Philippine peso also appreciated PHP56.15 (-0.47%). Meanwhile, the Chinese yuan and Indian rupee appreciated slightly, to CNY7.091 (-0.42%) and INR83.87 (-0.03%), respectively. The Chinese yuan's strength amid a stronger US dollar came amid rising corporate demand for the Chinese currency as expectations of a US interest rate cut grew.
- The rupiah strengthened last week to IDR15,455 (-0.24%). Despite the stronger dollar, foreign capital flowed again last week, reaching IDR6.21 trillion based on transaction data from August 26-29, 2024. Foreign capital is mostly poured into the stock market, where net purchases reach IDR3.89 trillion. Meanwhile, net purchases in the SRBI and government bonds markets were IDR1.56 trillion and IDR0.76 trillion, respectively.

E. DEBT SECURITIES MARKET DEVELOPMENT

1) Yield

- The US Treasury market experienced a bearish steepening last week. The 2-year yield was flat at 3.917% (+0 bps), while the 10-year yield rose to 3.903% (+10 bps). This trend occurred amid stronger economic growth data, limiting interest rates from falling more quickly back to normal levels.
- Like the US trend, the Eurozone markets also experienced a bearish steepening. In the Eurozone, the 2-year yield rose to 2.388% (+2 bps), and the 10-year yield rose to 2.298% (+8 bps), despite recent data showing lower inflation and closer to target. Meanwhile, the UK yield rose to 4.104% (+44 bps) for the 2-year yield and 4.014% (+10 bps) for the 10-year yield.
- Overall, the 10-year yield in Asia was relatively unchanged, except in South Korea, where it rose to 3.088% (+8 bps). The percentage in China and India closed at 2.178% (+2 bps) and 6.869% (+2 bps). Meanwhile, the rate in Japan was stable at 0.889% (0 bps). The Malaysian and Thai markets also reported a stable trend, closing at 3.759% (-1 bps) and 2.548% (-1 bps), respectively.
- The People's Bank of China bought RMB400 billion (\$56 billion) worth of long-term government bonds on Thursday, including RMB300 billion worth of 10-year bonds and RMB100 billion worth of 15-year bonds. Traders interpreted the move as preparation to directly support bond yields in the booming debt market.
- Yields in the domestic market were unchanged. The percentage closed at 6.513% (-2 bps) for the 2-year yield and 6.633% (-1 bps) for the 10-year yield. Foreigners posted a fairly large daily net sale at the beginning of last week, reaching IDR4.08 trillion. After that, foreign capital flowed back in; cumulatively, foreigners posted net buys below IDR1 trillion for the week. Meanwhile, Indonesia's 5-year CDS fell again to 67.40 (-1.55%) at the end of last week.
- The SRBI auction at the end of last week posted a total winner of IDR12.00 trillion, of which IDR10.70 trillion was for the 12-month tenor. The weighted average yield in the auction was 7.032%, 7.121%, and 7.167% for the 6, 9, and 12-month tenors, respectively. Meanwhile, the government bond auction on Tuesday last week recorded incoming bids reaching IDR23.88 trillion or almost four times the amount won (IDR8.00 trillion). The government will auction seven series in the first week of September with an indicative target of IDR22.00 trillion.

2) Index

- The domestic bond index posted a positive weekly performance. The Indonesia Composite Bond Index (ICBI) rose to 391.14 (+0.20%). The increase was supported by the positive performance of the government and corporate bond indices, which rose to 382.54 (+0.20%) and 445.77 (+0.17%), respectively.
- The 3-year corporate bond yield moved mixed amid a slight increase in the benchmark yield. The 3-year government bond yield rose to 6.458% (+2 bps). The decrease in premium contributed to the decline in the 3-year yield for AAA and A ratings, to 7.045% (-2 bps) and 9.442% (-8 bps), respectively. On the other hand, the premium increase has pushed up the yield on BBB-rated corporate bonds to 11.023% (+7 bps). The premium for AA ratings is stable, so its increase is the same as the increase in the benchmark yield, to 7.668% (+2 bps).
- The Indonesia Stock Exchange (IDX) recorded 104 bond and sukuk issuances from 64 issuers throughout 2024, with a value of IDR86.49 trillion. Thus, the total bond and sukuk issuances listed on the IDX amounted to 591 with an outstanding nominal value of IDR465.45 trillion and USD60.12 million, issued by 132 issuers.

H. NEWS ANALYSIS

Table 5. News Highlight Over The Past Week

Industries	News Headlines and Analysis
Automotive	Fuel-Based Cars Not Sold Starting in 2045 (Bisnis Indonesia-23/08/2024). The ban on the sale of new conventional vehicles in 2045 is an effort to accelerate the adoption of electric vehicles or battery electric vehicles (BEV). On paper, the plan to stop selling conventional cars is quite challenging even though this policy will only be in effect for another 21 years. This is because the majority of new cars sold in the Indonesian market still use fossil fuels.
Banking	Don't Expect Bank Credit Interest Rates to Decrease Soon (Harian Kontan-28/08/2024). This is because the basic credit interest rate (SBDK) has not increased much in the era of high interest rates. On the contrary, SBDK has decreased slightly. However, the transmission of the decline in the benchmark interest rate to credit interest rates takes time. In addition, banks also consider macroeconomic conditions and credit risk.
Construction	State-Owned Enterprises (BUMN) Karya Seeks Alternative Projects (Bisnis Indonesia-26/08/2024). This is done because the decrease in the infrastructure budget in the 2025 State Budget Draft (RAPBN) will have an impact on the financial performance of BUMN Karya, considering the large dependence of this group on state projects.
Food and Beverages	The Government is Not Afraid of Being Attacked by Rejection of The Implementation of Excise on Packaged Sweetened Beverages (MBDK) (Bisnis Indonesia-23/08/2024). This is done because, to reduce sugar consumption, which is often excessive in these drinks. In addition, reducing sugar consumption can help reduce the burden of sugar-related diseases on the public health system. On the other hand, excise on sweetened beverages is also a source of revenue for the government.
Insurance and Guarantee	Wide Gap of Disaster Insurance Protection (Bisnis Indonesia-24/08/2024). The main obstacle is the premium for natural disaster coverage which is indeed not cheap. In addition, managing catastrophic risks requires a strong knowledge of natural disaster mechanisms and risk descriptions that must use modeling. On the other hand, the potential for earthquakes and tsunamis originating from subduction zones in western and southern Indonesia is real. However, the impact on insurance will only be significant if the affected area is a high economic area such as an urban or industrial area.
Metal and Gold	Crisis Hits Steel Industry (Bisnis Indonesia-28/08/2024). This is due to the price plunge triggered by weakening demand and abundant supply from China, the world's largest steel producer. For information, the warning of the threat of a crisis in the steel industry was previously voiced by China Baowu Steel Group Corp., the world's largest steel producer. On the other hand, the Chinese steel market, which is currently the largest market in the world, is showing various signs of crisis due to the prolonged decline in the performance of the property sector and has not shown any signs of ending.
Mining	Nickel-Rich Country Anomaly (Bisnis Indonesia-23/08/2024). This happened because there was an indication of a spike in nickel ore imports in June 2024 on a monthly basis. At least 896,000 wet metric tons (wmt) of nickel ore entered the country in June 2024, a 62% spike on a monthly basis. The spike in imports indicates that the supply of nickel ore in Indonesia is tightening, thus hampering the production of nickel pig iron (NPI). However, on the other hand, this was done to ensure the smooth operation of the smelter with nickel specifications that are following production needs. In addition, nickel ore imports are a complex process with various causal factors.
Multifinance	Multifinance Relies on Internal Cash for Maturing Bonds (Bisnis Indonesia-27/08/2024). The use of internal cash is the most rational option for finance companies or multifinance companies in paying off maturing bonds in the second half of this year. This step was taken because the liquidity conditions of multifinance companies are quite good. In addition, there are still many other credit facilities that can be used to support financing amidst the current challenging bond market.
Plantation	Food Commodity Prices Rise Again (Harian Kontan-29/08/2024). This is due to reduced supply due to lower production volume in the second harvest season compared to the first main harvest season. In addition, extreme weather such as drought, flooding, or abnormal temperatures can affect the harvest. On the other hand, rising fuel prices such as oil and gas can also increase food production and transportation costs.
Power and Energy	3 Ideal Locations for Nuclear Power Plants (PLTN) Determined (Bisnis Indonesia-29/08/2024). The reason is, that the three areas are considered ideal because they are not prone to earthquakes or volcanoes. Moreover, currently, public acceptance of the development of nuclear power plants has exceeded 50%. The government indeed views the potential of nuclear energy as very large, so that it can be utilized in accelerating the achievement of net zero emissions (NZE) and also the Nationally Determined Contribution target. For the smooth running of the program, the government has also communicated with Russia, Japan, South Korea, and the United States regarding the development of nuclear power plants in the country.

Industries	News Headlines and Analysis
Property	Property Business Will Advance (Harian Kontan-29/08/2024). This is driven by the government's decision to extend the government-borne value-added tax incentive (PPN DTP) of 100% until the end of 2024 amid weakening public purchasing power. In addition, in other developments, property issuers also benefited from the signal of a rate cut by the United States (US) central bank. Although it did not specify the timing and amount of the cut, the statement affirmed expectations of an interest rate cut at the September 2024 meeting.
Seaport	Import Ports to Move to the East Soon (Harian Kontan-27/08/2024). There are fundamental reasons behind the proposal to move the import entry point to the eastern region. One of them is the accumulation of 26,000 containers that occurred at the ports of Tanjung Priok and Tanjung Perak in May 2024. In addition, another consideration is to facilitate the supervision of imported goods, including preventing illegal imports. The relocation is also expected to stimulate the growth of the shipping and logistics industry in eastern Indonesia.
Telecommunication	Problems Piling Up in The Digital Era (Bisnis Indonesia-23/08/2024). This is because the exponential growth rate of internet users in the country tends to be uneven and is only enjoyed by certain areas with adequate infrastructure. On the other hand, the large Indonesian internet market has attracted the interest of American tycoon Elon Musk to enter the country through the Starlink satellite-based internet service. Unfortunately, Starlink's low-orbit satellite-based internet service that entered retail was not responded to positively by local business actors. The reason is, on the one hand, Starlink's service is a reinforcement of domestic players to increase capacity and accelerate the distribution of local players' internet to rural areas. However, on the other hand, Starlink's entry into retail sales is a threat to the Indonesian internet ecosystem, including fixed internet service providers. The problem is that fixed internet players who have worked hard to pull cables to rural areas to capture the market are losing ground to Starlink.
Toll Road	3 Toll Road Projects Become Priorities of The New Government (Bisnis Indonesia-23/08/2024). This is following the land transportation connectivity program that has been fully delegated to the new government. The three toll roads are the Trans-Sumatra Toll Road (JTTS), the completion of several sections of the Trans-Java Toll Road (JTTJ) to the procurement of toll roads in the National Capital (IKN) of the Archipelago.
Trading and Distribution	Current Account Balance Full of Obstacles (Bisnis Indonesia-27/08/2024). Because, on the goods transaction side, challenges will come from commodity prices that are still flat. Meanwhile, on the services transaction side, geopolitical tensions in the Middle East that have not shown any signs of abating will make shipping costs between countries, including insurance, remain high. In addition, a more severe challenge in the medium and long term comes from the economic slowdown of the United States, which is one of Indonesia's main trading partners.

Disclaimer:

The rating contained in this report or publication is the opinion of PT Pemeringkat Efek Indonesia (PEFINDO) given based on the rating result on the date the rating was made. The rating is a forward-looking opinion regarding the rated party's capability to meet its financial obligations fully and on time, based on assumptions made at the time of rating. The rating is not a recommendation for investors to make investment decisions (whether the decision is to buy, sell, or hold any debt securities based on or related to the rating or other investment decisions) and/or an opinion on the fair value of debt securities and/or the value of the entity assigned a rating by PEFINDO.

All the data and information needed in the rating process are obtained from the party requesting the rating, which is considered reliable in conveying the accuracy and correctness of the data and information, as well as from other sources deemed reliable. PEFINDO does not conduct audits, due diligence, or independent verifications of every piece of information and data received and used as the basis for the rating process. PEFINDO does not take any responsibility for the truth, completeness, timeliness, and accuracy of the information and data referred to. The accuracy and correctness of the information and data are fully the responsibility of the parties providing them.

PEFINDO and every one of its members of the Board of Directors, Commissioners, Shareholders, and Employees are not responsible to any party for losses, costs, and expenses suffered or that arise because of the use of the contents and/or information in this rating report or publication, either directly or indirectly.

PEFINDO generally receives fees for its rating services from parties who request the ratings, and PEFINDO discloses its rating fees prior to the rating assignment. PEFINDO has a commitment in the form of policies and procedures to maintain objectivity, integrity, and independence in the rating process.

PEFINDO also has a "Code of Conduct" to avoid conflicts of interest in the rating process.

Ratings may change in the future due to events that were not anticipated at the time they were first assigned. PEFINDO has the right to withdraw ratings if the data and information received are determined to be inadequate and/or the rated company does not fulfill its obligations to PEFINDO. For ratings that received approval for publication from the rated party, PEFINDO has the right to publish the ratings and analysis in its reports or publication and publish the results of the review of the published ratings, both periodically and specifically in case there are material facts or important events that could affect the previous ratings.

Reproduction of the contents of this publication, in full or in part, requires written approval from PEFINDO. PEFINDO is not responsible for publications by other parties of content related to the ratings given by PEFINDO.
